

Package ‘mypackage’

January 15, 2024

Title Demo Package as an Example

Version 0.0.0.9000

Description This package is used as a demo for a simple package for the course MATH 3190 at Southern Utah University. It contains functions on adding, subtracting, and graphing a simple scatterplot.

R topics documented:

add	2
cranes	2
ggraph	3
hello	3
subtract	4
Index	5

add	<i>This is my addition function</i>
-----	-------------------------------------

Description

This is my addition function

Usage

```
add(x, y)
```

Arguments

x	this is the first value to add
y	this is the second value to add

Value

This function returns the sum of x and y

Examples

```
## Start with something simple
add(1,1)

## Now something more difficult
add(49,60)
```

cranes	<i>Cranes Data Set</i>
--------	------------------------

Description

This data set contains information on the number of cranes at Aransas National Wildlife Refuge in Austwell, Texas by year from 1938 to 2016.

Usage

```
cranes
```

Format

A data frame with 2 variables: cranes and year.

ggraph	Create a quick scatter plot in ggplot.
--------	--

Description

This will graph two given vectors in a ggplot-style scatter plot with the x-axis labeled "x" and the y-axis labeled "y".

Usage

```
ggraph(x, y, point_color = "black", point_size = 1.5, point_shape = 19)
```

Arguments

x	This is the first vector to be plotted.
y	This is the first vector to be plotted.
point_color	This is the color of the points that will be plotted.
point_size	This is the size of the points that will be plotted. The default is size 1.5.
point_shape	This is the shape of the points that will be plotted. The default is 19: a filled circle.

Value

This function returns a ggplot scatter plot object.

Examples

```
## Create a scatter plot of y vs x.  
x <- rnorm(100)  
y <- x + rnorm(100, 0, 0.3)  
ggraph(x, y)
```

hello	This is my hello function. There are no parameters.
-------	---

Description

This is my hello function. There are no parameters.

Usage

```
hello()
```

Value

This function returns the message "hello world".

Examples

```
## This is the only thing this function does.  
hello()
```

subtract

This is my subtract function

Description

This is my subtract function

Usage

```
subtract(x, y)
```

Arguments

x	this is the first value
y	this is the second value to subtract

Value

This function returns the difference of x and y

Examples

```
## Start with something simple  
subtract(1, 1)  
  
## Now something more difficult  
subtract(49, 60)
```
